FIRETRACE[®]
AUTOMATIC FIRE SUPPRESSION SYSTEMS

The problem

Research shows nearly 700 combine fires occur annually in the US, with losses exceeding \$10 million of equipment, not including lost production time, crops and the cost of leasing replacement equipment.

The agriculture industry utilizes very expensive machines for time-sensitive harvesting operations. This equipment, while functionally extremely reliable, can be susceptible to elements of the working environment.

Over time hoses can fatigue and fail or chaff can build-up on the machine, accumulating in the engine compartment or other hazardous areas. The heat of the engine and exhaust systems can easily ignite the leaking fluid or dry materials leading to a fire that can:

- Badly damage or destroy the harvester
- Injure the operator
- Burn the crop
- Delay the harvest – possibly resulting in crop losses

Fires can be potentially be a significant problem, endangering personnel, equipment, worksites and even the environment. Firetrace provides an excellent solution to help prevent a small fire from becoming a major event.

Additionally, many insurers, recognizing the potential losses associated with a fire in a harvester, have now begun to require automatic fire suppression as a condition of coverage.

Over 75% of combine fires occur in the engine area. More than 40% of fires are the result of the build-up of chaff and organic materials.

The solution

Firetrace automatic fire suppression systems were designed specifically for the harsh environment of farming machinery. In spite of the vibration, temperature extremes and chaff materials that can often cause interference with detection and operation that would cause other fire systems to fail, Firetrace's unique design enables it to endure these conditions for years of reliable service.

How it works

Firetrace is a totally self-contained fire detection and suppression system. It requires no electricity to operate and offers automatic 24/7 protection for the machine.

The proprietary red Firetrace Detection Tubing is the key to detecting fires where and when they start. By routing the tubing through the areas to be protected, Firetrace's detection can get right to the source of the fire. Firetrace tubing is constructed from a polymer composition; it is immune to the dirt, vibration and shocks associated with harvesting. When the tubing is exposed to the heat and flame from a fire, the tubing bursts, activating the system.

Firetrace is not a replacement for following a strict cleaning regimen for the machine as dictated by the manufacturer, or as conditions warrant. Firetrace is an excellent solution to help prevent a small fire from becoming a major event.

Firetrace's Vehicle Applications

Firetrace has more than 45,000 systems installed protecting critical equipment worldwide. Firetrace has its origins in the late 1980's in the United Kingdom as a special hazard fire suppression system. Through the 1990's applications expanded to include enclosures such as machines, fume hoods, data centers and electrical cabinets as distribution increased in Europe.

In 2001, the worldwide rights to Firetrace were purchased by Firetrace USA, a group of fire suppression industry veterans who saw the value in creating fire suppression systems for "micro-environments." This concept is simply providing supplemental protection that suppresses fire quickly within the protected space before larger room or building systems would activate. As a result of this supplemental protection, fire damage, both direct and collateral, and costs associated with cleanup and downtime are significantly reduced or eliminated. Available in multiple system sizes (ranging from one pound systems to 50 pound systems) utilizing a variety of

fire suppressing agent options, Firetrace is now the choice fire suppressing system for virtually any enclosed application, including farming equipment and combines.

Firetrace can be fitted in virtually any machine, new or existing.

- Fast, reliable fire detection
- Requires no power to operate, offering 24/7 protection
- Installs in new or existing machines
- Tolerant of the harsh working environment, including temperature extremes and vibration
- Doesn't interfere with installation or maintenance of equipment

Distributor:

Firetrace is available exclusively through our worldwide distributors, each of which has been properly trained in the installation and maintenance of Firetrace systems. To locate the Firetrace distributor nearest you please contact us at:

Firetrace International

15678 N. Greenway-Hayden Loop, Suite 103
Scottsdale, AZ 85260 USA

1-866-607-1218 (US and Canada)

1-480-607-1218 (Elsewhere)

1-480-315-1316 (Fax)
